

MED SLED™

Tactical Rescue Sled

The Med Sled Tactical Rescue System has been developed to enable a single rescuer to rapidly extract a casualty from a difficult or even hostile situation such as from combat zones, mass shooting incidents and terrorist attacks.

Features:

- A specially designed integrated rescuer tether can be attached around the waist or across the torso of the operator, enabling them to remain hands free to carry equipment or even operate a weapon if needed.
- Patented Perimeter Tether provides stabilization to the sled for easy horizontal movement.
- 15cm (6 inches) shorter in width than the standard sleds in this range, enables the casualty to use their hands if needed.
- Three securing cross straps.
- T-strap at foot end provides extra support.
- Eight lifting handles enable the sled to be carried by multiple rescuers if required in difficult situations.
- Foot end pulling strap.
- Polyethylene flexible base board enables the sled to move smoothly over toughest of ground such as sand, thick brush, and urban terrain.
- Can be used with backboard or basket stretcher.
- Each sled rolls up compactly to fit inside a carry bag – single shoulder strap bag supplied with every sled.
- 100% assembled for immediate use.

Specifications:

Packed: 76cm x 25.5cm approx.

Unrolled: 221cm x 76cm approx.

Weight: 2.27kg approx.

Safety tested to: 450kg

Material: High density Polyethylene

Colours: Black or Red

Product code: MS30
