

EMS BARIATRIC EVACMAT ^{CE}

(Part of the “SKI” range of products)

The EMS Bariatric EvacMat is designed to assist emergency services personnel in the safe rescue and evacuation of bariatric/large individuals from locations including public or private buildings where no other means of evacuation is possible.

- Can assist with the horizontal or vertical evacuation of bariatric service users.
- Tough, low friction, replaceable base enables service users to be moved over any surface – indoor or outdoor.
- Service user is securely held within the EMS EvacMat stabilising the body mass.
- Colour coded cross straps.
- Extended ladder handle at head end allowing for multiple rescuer contact.
- Four side ladder handles.
- High and low level positioning handles.
- 8 heavy duty anchor points.
- Long board pocket.
- Slide Sheet for ease of transfer.
- Pair of extra ladder handles.
- Easy clean after use.
- WLL 400kg.
